## Yale Panic Exit Device

### Yale PED Panic Exit Device for Single Doors

The Yale PED Panic Exit Device effectively addresses the problem of security on emergency exit doors.

The bold green and black cross arm is linked to a Lockmaster multi-point door lock that gives full locking down the length of the door frame through hooks and anti-lift pins. Even when the door is locked, emergency exit can be achieved by depressing the bar as this automatically overrides the locked state to retract all locking points. The locking points are then re-engaged by lifting the internal toggle switch and arm, making the door fully secure from outside once more.

Yale PED is suitable for PVCu, aluminium and timber doors, and is supplied in a kit including lock, cross arm and keeps. Profile related packers should be ordered separately, as should the optional top and bottom shootbolts and keeps if these are required.

The optional outside access kit allows the door to be opened and locked from outside via a key and lever.

Yale PED is tested, certified and CE marked for single doors to BS EN1125:2008.

It has been cycle tested to 200,000 operations and can be used on doors up to 200Kg.

#### Benefits at a glance:

- Tested, certified and CE marked to BS EN1125:2008 (classification 37601421AB)
- Gives emergency exit whilst retaining security through Lockmaster multi-point lock
- Supplied in set including cross arm, lock and keeps (Hook/Pin type includes flat keeps for rebating into timber. Hook/Pin/Roller type includes keeps that accept profile related packers)
- Optional outside access kit available
- Green and black cross arm contrasts with most door colours
- Suits PVCu, aluminium and timber single doors
- Tested to 200,000 cycles
- Can be used on doors up to 200Kg
- 950mm cross arm
- High corrosion resistance (240 hours neutral salt spray test)
- Double door solution due for launch during 2013

Simply everything.

Everything simple.
