Door Restraint

greenteQ Door Restraint for Flush Timber & Composite Doors

The greenteQ Door Restraint is an attractive and effective alternative to a traditional door chain on flush timber and composite doors.

The hinged hasp section fits to the outer frame, whilst the ball-end bracket fixes to the door leaf. When engaged, the restraint allows the door to be opened sufficiently to allow a visitor's identity to be checked in much the same way that a standard chain does.

When disengaged the hasp folds neatly back against the wall, or through 180° against the side panel, making it a much neater product in use than a chain that would dangle untidily down the door frame.

greenteQ Door Restraints are available from VBH stock in attractive polished gold and polished chrome finishes to complement most coloured or natural finish doors.
